

FIRE SAFETY CONSULTANTS, INC.

Consulting Services

FSCI can be used as a code permitted, third party consulting firm to provide the needed assistance to both governmental and private entities to determine the acceptability of specialized technologies, processes, facilities, materials and uses. Our recommendations may be used by the local code official/authority having jurisdiction, developer, builder, or building owner/occupant to determine the safe operation and use of a facility. What sets us apart from the rest?

- We work closely with code officials to ensure complete accuracy on your consulting project
- We work with government entities, as well as, private entities

FSCI building, fire, and life safety code consulting can develop proper protection criteria based on economics, meaningful goals, and governing codes and standards. We can provide complete building, fire, and life safety code consulting, site review, and inspection services.

FSCI can analyze current building conditions, review applicable code requirements, evaluate and provide recommendations for existing fire protection, storage arrangements, fire code and building code, and/or life safety code requirements. FSCI can provide consulting services in the following areas:

- Fire Protection System Evaluation
 - Commodity Storage vs. Sprinkler Density
